TECH CENTER 1600/2900

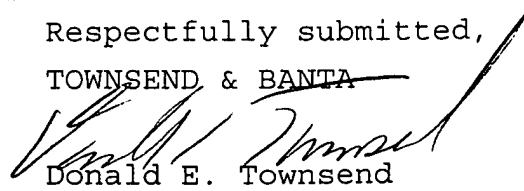

Sir:

Applicants' counsel is in receipt of the PTO Filing Receipt for the above identified pending patent application, a copy of which is attached hereto. Upon verifying the accuracy of the data presented on the Filing Receipt it was noted that there are errors in the title for this invention which were introduced by the Patent Office. As evidenced by the attached copy of the Declaration and Power of Attorney, and first page of the original specification which contains the title, the word "reagent" is singular. However, the word has been changed to plural on the Filing Receipt.

It is respectfully requested that the Patent Office records be corrected to reflect the correct title and that the undersigned be provided with a corrected Filing Receipt.

Respectfully submitted,

IMMUNOASSAY REAGENT AND IMMUNOASSAY METHOD

5 TECHNICAL FIELD

The present invention relates to an immunoassay reagent utilizing an insoluble carrier and an immunoassay method, and more particularly to an immunoassay reagent and an immunoassay method capable of high-sensitive detection of a
10 target substance in a subject.

BACKGROUND ART

In the field of clinical testing, diagnoses of diseases are carried out using biosamples (such as blood and urine).

15 For these diagnoses, a variety of assays have been developed and utilized. Typical assays include biochemical assays such as utilizing an enzyme reaction, and immunoassays such as utilizing an antigen-antibody reaction. The recent demand to perform precise assaying of components present in
20 biosamples has led to the wide-spread use of immunoassay methods utilizing highly-specific antigen-antibody reactions.

Examples of immunoassay methods include immuno-turbidimetry (TIA method), latex immunoassay (LIA method),
25 enzyme immunoassay (EIA method) and radio-immunoassay (RIA
